ABOUT

Systems/DevOps Engineer with hands-on experience in automation, configuration management, deployments optimization, microservices, monitoring tools. Familiar with AWS, GCP and Azure, implementing CI/CD and DevOps methodologies. Follower of KISS principles and Unix philosophy lover.

Speaking English (B2) and Russian (native).

Education: Bachelor of telecommunication technologies.

EXPERIENCE

3. *Site Reliability Engineer*   at Akamai Technologies   *04/21 − present*

2. *Systems/DevOps Engineer*   at EPAM   *1 y.*   *03/21 − 03/22*

   Customer: Axway

   Performing Monitoring Engineer role in monitoring team:

   - Implemented solutions from my Monitoring Architect.

   - Developed automation to deploy and keep up-to-date monitoring tools configuration.

   Results:

   - Supported 6 Elasticsearch clusters in different environments/regions.

   - Developed CI/CD automation for monitoring stack and increased image building time significantly.

1. *Trainee Systems/DevOps Engineer*   at EPAM   *6 mos.*   *09/20 − 03/21*

   Successfully completed practical tasks in the learning process and took part in the team and personally in the presentation of the completed project.

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
  credly.com/badges/5c45bd5f-11f6-4f70-b92d-d8481dd93b5c

TECHNOLOGIES

- Cloud Platforms: Amazon Web Services, Google Cloud Platform
- Cloud Automation: Terraform, AWS CDK, Cloudformation, Pulumi
- Container Orchestration: Kubernetes
- CI/CD: Jenkins, Gitlab CI, argoCD
- CMS: Ansible
- Monitoring: Prometheus, Grafana, Zabbix, many SaaS tools(Datadog, AppDynamics, NewRelic)
- Logs: ELK/EFK, Loki
- Languages: mostly Bash and Python, but I worked some with a dozen different languages over time
- Few more keywords: Linux, Docker, Git, GKE, KVM, Go

Many things I didn't mention (e.g. web servers, load balancers) since it would be too much and is not really important.
